

• **START HERE**

Welcome to the **Dispatch Guide**.

How a job gets from your board to your driver's phone — assigning to your own drivers or a vendor, on web and mobile.

One board

Every order, job, and driver in one place.

Assign in seconds

Driver or vendor, on web or mobile.

Live status

Watch each load move
Accepted →
Completed.

• **CHAPTER 1**

The dispatch board & modes

What you dispatch, how the board looks, the three dispatch modes, and the pre-flight checklist.

1 What you dispatch

A Project is the container; an Order is the daily slice you dispatch; you assign and send the jobs inside an order.

Concept	Role in dispatch
Project	Holds the customer, sites, materials, and rates
Order	The day's work: trucks, start time, target loads/hours
Job	One truck's assignment in an order — what you send to a driver

2 The dispatch view

Each order shows its status, truck count, and per-job rows. Each job moves along this flow:

The screenshot displays the 'Dispatch' view in a software application. The top navigation bar includes 'Dispatch', 'Assigned', 'Approvals', 'Live Map', 'Reports', 'Sites', and 'Settings'. The main content area shows a list of orders. The first order, 'A Gravel Inventory', is selected and its details are shown below. It includes customer information, materials, pickup and dropoff locations, and a table of jobs. The second order, '35442 Torrey Pines South Parking Lot Renovation', is also visible. The interface includes various filters, search bars, and action buttons like 'Send All Jobs', 'Export Jobs', and 'Dispatch'. Red arrows and numbers 1 and 2 highlight specific elements: arrow 1 points to the 'Dispatch' button, and arrow 2 points to the 'Edit' button for a job.

3 Dispatch modes

Mode	Who hauls it	Assign panel	When
Regular	Your own driver	Driver	Your employee drivers and trucks
Direct	An Owner-Operator you dispatch	Driver	A single-truck hauler whose truck you assign
Hot	A vendor who sub-dispatches	Vendor	Multi-truck vendor; their dispatcher picks

⚠ Hot needs an accepted Vendor connection; a Direct Owner-Operator must be shared to you. Check Settings → Vendors and Drivers.

4 Before you dispatch

- 1 **Work exists** — a project and at least one order for the day.
- 2 **Trucks & drivers set up** — drivers invited, trucks created, default trucks paired.
- 3 **Connections confirmed** (if using vendors) — Vendor accepted and Owner-Operators shared to you.

● CHAPTER 2

Dispatch from the web

The step-by-step assign → send → monitor flow, with real screenshots.

Assign, configure, send, and monitor from the web dashboard. Numbered markers on each screenshot match the steps.

1 Assign a driver (or vendor)

- 1 **Assign** — opens the Driver / Vendor picker on the row.
- 2 **Driver** — one of your drivers (Regular) or an Owner-Operator (Direct).
Search by name, phone, or truck.
- 3 **Vendor** — hand to a hauling company that sub-dispatches (Hot).

2 Bulk assign (optional)

- 1 Click the **Bulk Assign** (persons) icon at top right.
- 2 Use **+** to set the vendor's number of trucks.
- 3 Click **Assign All** to assign every selected job at once.

3 Configure & send

Hover and click **Edit** to confirm sites, truck/trailer, date, and rates; **Submit** to save. Then **Send** on a row — or **Send All Jobs** at the top.

⚡ "Send All Jobs" dispatches every assignment. Double-check the list — drivers are notified instantly.

4 Monitor

Follow the Status of each job; advance it with the arrow and follow trucks on the Live Map.

● CHAPTER 3

Dispatch from mobile

Dispatch from the Tread app when you are away from your desk.

The same dispatch from the app — useful away from your desk. Open the Dispatch tab.

- 1 Tap the order's truck count to expand, then **+ Assign**.
- 2 Search a driver by name or truck number and tap.
- 3 Tap **Send** — instant push; the driver accepts and starts from their phone.

● CHAPTER 4

Your driver receives the job

What the driver sees and does on their phone after you send.

Once you send, the driver gets the job on their phone. Here is what they do:

1 View the request

New offers appear in the driver's **Assigned** tab under **New Tread Requests**. Tap **View Request**.

2 Accept the job

The driver reviews pickup, drop-off, and material, then taps **Accept**. Until then you see **Pending**.

3 Start the job

The driver taps **Start**. Their location appears on your **Live Map** and the status moves.

● CHAPTER 5

Tips & support

What helps most — and how to reach support.

1 Tips & common pitfalls

⚠ Use Driver for your own drivers and Vendor for haulers who sub-dispatch. Picking wrong is the #1 reason a driver never gets the load.

- **Driver didn't get the load?** If it's **Assigned** (not **Sent**), hit **Send**. If sent but **Pending**, they haven't accepted, or lack app/permissions.
- **Hot** jobs show the driver's name only after the vendor assigns one of their drivers.
- Set a **default truck** on each driver — fewer clicks, fewer mistakes.
